

FlockTrax App Review Guide

Date: 2026-05-01

Platform: iOS App Store Review

App: FlockTrax Mobile

Target version: 1.0.1

Target build: 8

App Review Notes

FlockTrax Mobile is the mobile field-collection companion to the FlockTrax web console. The platform is intended for poultry and farm operations teams that need to capture, review, and synchronize operational flock data between field users and administrative staff.

The reviewer account provided for App Review is intentionally limited. It allows sign-in and navigation through the app so the reviewer can evaluate the interface, structure, and primary read flows, but certain actions that could modify sensitive or production-linked operational data may be restricted. This is expected behavior and not a defect.

What to expect during review:

- Sign in with the supplied review credentials.
- Access the main mobile workflows used for field data collection and record review.
- Navigate core screens without role-based navigation blocking.
- Some write or administrative actions may be unavailable or limited to protect live data integrity.

This app is not the full administrative console. Broader management, reporting, and administrative workflows are handled in the FlockTrax web console, while FlockTrax Mobile focuses on mobile field use and operational data entry support.

Reviewer Overview

FlockTrax is an operational platform designed for poultry and farm teams. The platform includes:

- FlockTrax Web Console: administrative, reporting, and broader management workflows
- FlockTrax Mobile: field-facing mobile app for on-site data collection and operational support

The intended audience includes internal business and operational users such as farm managers, field staff, and authorized team members responsible for flock recordkeeping and day-to-day operational tracking.

Purpose Of The Mobile App

FlockTrax Mobile is designed to help authorized users:

- collect and review flock-related operational data in the field
- enter updates closer to the point of work
- support accurate downstream reporting in the web console
- reduce manual re-entry and missed information

The mobile app is intentionally focused on practical field use. Broader administrative, configuration, and reporting workflows are handled in the companion web console.

Review Account Behavior

The App Review account is configured to allow meaningful evaluation while protecting operational data integrity.

- Navigation is available so the reviewer can inspect the app structure and core experience.
- Primary read flows are available for evaluation.
- Some actions that would modify sensitive or production-linked data may be restricted.
- Limited permissions are expected and reflect the review configuration, not broken functionality.

Why Access Is Limited

Because the platform is used in a real operational context, the review account is intentionally configured to permit product evaluation without exposing or altering sensitive live business data. This allows Apple to review the app's purpose, structure, and main workflows while preserving safe handling of production-linked records.

Suggested Reviewer Path

If useful during review, the reviewer can:

- sign in using the supplied review credentials

- navigate the primary mobile screens
- review representative field and record screens
- confirm that the app supports operational data collection as a companion to the FlockTrax web console

Support

If additional access or clarification is needed during review, please use the contact information provided in App Review
